

Neuralink is a neurotechnology company that develops brain-machine interfaces. The company was founded by Elon Musk in 2016. Neuralink's goal is to create a brain-machine interface that can help people with paralysis and other disabilities. The company has conducted several clinical trials and has received approval from the FDA for its first human trial. Neuralink's technology is based on a brain chip that is implanted in the brain. The chip is connected to a computer, which can then control the user's movements. Neuralink's technology is still in the early stages of development, but it has the potential to revolutionize the way we interact with the world.
