Chandradip News24, a leading news outlet, reports on a significant environmental issue in Chandradip. The article details the discovery of a large, stagnant pond filled with green algae, posing a health risk to the surrounding community. Local residents have expressed concern, and authorities are investigating the cause of the pollution.

The pond, located in a densely populated area, has become a breeding ground for mosquitoes and other insects. The water is thick with green algae, and the surrounding area is filled with a strong, unpleasant odor. The local government has been notified, and they are working to identify the source of the pollution and implement measures to clean up the pond. The article highlights the need for better urban planning and environmental management in Chandradip.

Chandradip News24 continues to provide updates on the situation. The local government has announced that they will be conducting a thorough investigation into the cause of the pollution. They are also working to improve the drainage system in the area to prevent such incidents from recurring. The article emphasizes the importance of community involvement in environmental protection and the need for government action to address the issue.

In addition, Chandradip News24 reports on the impact of the pollution on the local population. Many residents have complained of respiratory problems and other health issues. The article also mentions that the pond has become a source of water for some of the poorer residents in the area, who are using the contaminated water for drinking and cooking. This highlights the urgent need for a solution to protect the health and well-being of the community.
