

Neuralink is a neurotechnology company that develops brain-machine interfaces. The company was founded by Elon Musk in 2016. Neuralink's goal is to create a brain-machine interface that can help people with paralysis and other neurological conditions. The company has conducted several clinical trials and has received approval from the FDA for its first human trial. Neuralink's technology is based on a brain chip that is implanted in the brain and connected to a computer. The chip can send and receive signals from the brain, allowing people to control a computer or other device with their thoughts.
