

# WhatsApp 'Two-Factor Authentication' Feature

written by Chandradip News24 | January 1, 2025

WhatsApp has introduced a new security feature called 'Two-Factor Authentication' (2FA) to enhance the security of user accounts. This feature allows users to add an additional layer of protection to their accounts by linking them to a secondary phone number. This secondary number is used to verify the user's identity when logging in from a new device or location. The feature is available to all users and can be enabled in the app's settings. WhatsApp states that this feature is designed to protect users from unauthorized access to their accounts, particularly in cases where a user's primary phone number might be compromised or stolen.

## WhatsApp 'Two-Factor Authentication' Feature

The new 'Two-Factor Authentication' (2FA) feature is designed to provide an extra layer of security for WhatsApp users. It works by linking a user's account to a secondary phone number, which is used to verify the user's identity when logging in from a new device or location. This secondary number is typically a landline or a secondary mobile number. The feature is available to all users and can be enabled in the app's settings. WhatsApp states that this feature is designed to protect users from unauthorized access to their accounts, particularly in cases where a user's primary phone number might be compromised or stolen. The feature is available to all users and can be enabled in the app's settings. WhatsApp states that this feature is designed to protect users from unauthorized access to their accounts, particularly in cases where a user's primary phone number might be compromised or stolen.
